

Creating that idyllic backyard oasis with a swimming pool is the perfect way to bring your family together during the summer. While you could certainly invest in an inflatable pool from your local big box retailer or even snag one of those trendy stock tank pools, an in-ground fiberglass pool is designed to serve your interests much better in the long run.

Fiberglass pools offer a customized way to turn your backyard into the ultimate outdoor sanctuary. In addition to their aesthetic appeal, they are also one of the easiest pools to maintain and are made of

the strongest and most durable materials. If you want a swimming pool to last a lifetime and one that will continually invite you to relax and enjoy time with family and friends, then it's time to discover Kansas City's own Aqua Blue Designs.

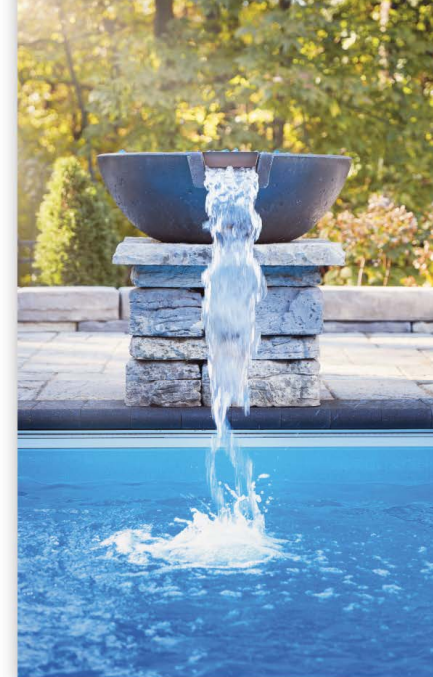

This company is *the* place to go in Kansas City for fiberglass pools. They have been in business for two decades and continue to gain traction at a highly-accelerated pace. When you partner with Aqua Blue Designs, Inc., you are working with one of the area's oldest and most experienced fiberglass pool contractors and installers. The best at what they do, this team of experts knows exactly what

it is doing and does it right each and every time.

"This is all we've ever done," expressed owner Norm Whitted.

It's no secret that a backyard pool is wonderful place to spend time, and Aqua Blue Designs can install the pool of your dreams quickly without sacrificing quality along the way.

"These are well-engineered products,"

noted Whitted, emphasizing the rigorous quality control measures and high standards to which these factory-made pools are subjected. "These pools are handcrafted in molds and delivered to your home ready to be installed by specially-trained technicians."

Further, the variety of styles ensures you will find the perfect complement to your backyard setting.

"We have 200-300 shapes and sizes to choose from through three manufacturers, making it easy for you to find what you want" said Whitted, whose company also offers accompanying inground spas that can be installed either flush with the ground or raised.

Fiberglass pools are highly compatible with salt chlorine generators, too. Even though salt water pools are popular, the

substance is less forgiving on concrete and metal surfaces. Conversely, fiberglass pools will stand up to salt virtually unscratched, and the salt chlorine generators used by Whitted are equipped with automated adjustments to allow for ease of maintaining the water chemistry. And when it comes to heat pumps to control pool water temperatures, Whitted only installs the most economical pumps.

"A fiberglass pool can save you time and money," expressed Whitted. "Fiberglass pools allow for more time to enjoy the backyard pool experience. Our customers spend about 20 minutes a week in pool maintenance because of the superior characteristics of the fiberglass surfaces." ■

TRENDING...

These days, it seems more and more people are desiring a fiberglass backyard pool to create a livable space as a source of relaxation, fun and beauty that can be confidently enjoyed for years to come.
